

CLAIMS

What is claimed is:

1. An image browsing user interface, comprising:

2 a display; and
4 a first function to select for viewing on the display an image belonging
 to a set of images, the set of images comprising at least one preferred image,
 each preferred image belonging to a group of images.

2. The image browsing user interface of claim 1, further comprising:

2 a second function to select for viewing on the display at least one
4 image belonging to a group of images, when the first function has selected the
 preferred image within the group of images.

3. The image browsing user interface of claim 1, further comprising:

2 a third function to designate the preferred image within a group of
 images.

4. The image browsing user interface of claim 3, wherein the third function

2 designates as the preferred image the most recently selected image within the
 group of images.

5. The image browsing user interface of claim 1, wherein the set of images contains

2 at least one individual image.

10005007-1 10204

6. The image browsing user interface of claim 1, wherein the first function
2 comprises a first pair of opposing directional modes, and the second function
comprises a second pair of opposing directional modes that is orthogonal to the
4 first pair of opposing directional modes.

7. The image browsing user interface of claim 1, further comprising:

2 a fourth function to delete all images except those belonging to the set
of images.

8. A image browsing user interface, comprising:

2 means for displaying at least one image; and
first input means for selecting for display an image belonging to a set
4 of images, the set of images comprising at least one preferred image, each
preferred image belonging to a group of images.

9. The image browsing user interface of claim 8, further comprising:

2 second input means for selecting for display at least one image
belonging to a group of images, when the first input means has selected the
4 preferred image within the group of images.

10. The image browsing user interface of claim 8, further comprising:

2 third input means for designating the preferred image within a group of
images.

10019757-110201

11. The image browsing user interface of claim 10, wherein the third input means
2 designates as the preferred image the most recently selected image within the
group of images.

12. The image browsing user interface of claim 8, wherein the set of images contains
2 at least one individual image.

13. The image browsing user interface of claim 8, wherein the first input means
2 comprises a first pair of opposing directional modes, and the second input means
comprises a second pair of opposing directional modes that is orthogonal to the
4 first pair of opposing directional modes.

14. The image browsing user interface of claim 8, further comprising:
2 fourth input means for deleting all images except those belonging to
the set of images.

15. A digital camera, comprising:
2 an optical system;
an imaging device to convert optical images received from the optical
4 system to corresponding digital images;
a memory to store the digital images;
6 a display;
control logic configured to designate a preferred digital image within
8 each of at least one group of digital images;

1000545407 110201

10 a first input control to select for viewing on the display a digital image
10 belonging to a set of digital images, the set of digital images comprising at
11 least one preferred digital image; and
12 a second input control to select for viewing on the display at least one
12 digital image belonging to a group of digital images, when the first input
14 control has selected the preferred digital image within the group of digital
14 images.

16. The digital camera of claim 15, wherein the control logic designates the most
2 recently selected digital image within each group of digital images as the preferred
2 digital image.

17. The digital camera of claim 15, wherein the set of images contains at least one
2 individual image.

18. The digital camera of claim 15, wherein the first input control comprises a first
2 pair of opposing directional modes, and the second input control comprises a
2 second pair of opposing directional modes that is orthogonal to the first pair of
4 opposing directional modes.

19. The digital camera of claim 18, wherein the first pair of opposing directional
2 modes lies horizontally with respect to a housing of the digital camera and the
2 second pair of opposing directional modes lies vertically with respect to the
4 housing of the digital camera.

1 20. The digital camera of claim 18, wherein the first pair of opposing directional
2 modes lies vertically with respect to a housing of the digital camera and the
3 second pair of opposing directional modes lies horizontally with respect to the
4 housing of the digital camera.

21. The digital camera of claim 15, further comprising:

2 2 a third input control to delete all digital images except those belonging
 to the set of digital images.

22. The digital camera of claim 15, further comprising:

2 2 a communication interface configured to transfer at least the set of
 digital images to an external device.

23. A method for manipulating images stored in a device, comprising:

2 2 selecting for display at least one image belonging to both a first and a
 second set of images using a first control;

4 4 selecting for display at least one image belonging to the second set of
 images using a second control; and

6 6 designating one of the at least one images belonging to the second set
 of images as a preferred image, the preferred image thereby becoming a

8 8 member of both the first and second sets of images.

24. The method of claim 23, wherein designating one of the at least one images

2 2 belonging to the second set of images as a preferred image is performed in
 response to at least one image not belonging to the second set of images being

10005007-1-102014

4 selected using the first control, the preferred image comprising the most recently
5 selected image from among the at least one images belonging to the second set of
6 images.

25. The method of claim 23, wherein designating one of the at least one images
2 belonging to the second set of images as a preferred image comprises embedding
a tag within the one of the at least one images belonging to the second set of
4 images.

26. The method of claim 23, wherein designating one of the at least one images
2 belonging to the second set of images as a preferred image comprises setting a
directory attribute associated with the one of the at least one images belonging to
4 the second set of images.

27. The method of claim 23, wherein designating one of the at least one images
2 belonging to the second set of images as a preferred image comprises adding to a
list of preferred images an identifier corresponding to the one of the at least one
4 images belonging to the second set of images.

28. The method of claim 23, further comprising:
2 deleting all images stored in the device except those belonging to the
first set of images.

29. The method of claim 23, further comprising:
2 uploading at least the first set of images to an external device.

10005407-110201
TO201710056001

30. The method of claim 29, wherein all images stored in the device are uploaded to
2 the external device, the external device subsequently operating upon only the first
set of images by identifying a tag embedded within each image belonging to the
4 first set of images.

31. The method of claim 23, wherein the device is a digital camera, a palmtop
2 computer, a PDA, a personal computer, or a communicator phone.

32. A method for manipulating images stored in a device, comprising:
2 selecting for display one of an individual image and a preferred image
using a first control, the preferred image belonging to a group of images;
4 selecting for display a different image belonging to the group of
images using a second control, when the first control has been used to select
6 the preferred image; and
designating the different image as the preferred image, when an image
8 not belonging to the group of images is subsequently selected using the first
control.

33. The method of claim 32, wherein designating the different image as the preferred
2 image comprises embedding a tag within the different image.

34. The method of claim 32, wherein designating the different image as the preferred
2 image comprises setting a directory attribute associated with the different image.

10005007-110201

35. The method of claim 32, wherein designating the different image as the preferred
2 image comprises adding to a list of preferred images an identifier corresponding to
the different image.

36. The method of claim 32, wherein the device stores at least one individual image
2 and at least one preferred image and further comprising:
4 deleting all images stored in the device except individual images and
preferred images.

37. The method of claim 32, wherein the device stores at least one individual image
2 and at least one preferred image and further comprising:
4 uploading at least the individual images and the preferred images to an
external device.

38. The method of claim 37, wherein all images stored in the device are uploaded to
2 the external device, the external device subsequently operating upon only the
individual images and the preferred images by identifying a tag embedded within
4 each individual or preferred image.

39. The method of claim 32, wherein the device is a digital camera, a palmtop
2 computer, a PDA, a personal computer, or a communicator phone.

40. A method for manipulating images stored in a device, comprising:
2 selecting for display an image belonging to both a first and a second
set of images using a first control;

100055007-110201

4 accessing the second set of images using a second control;
5 selecting for display a different image belonging to the second set of
6 images using the first control;
7 exiting the second set of images using the second control;
8 designating the most recently selected image belonging to the second
9 set of images as a preferred image, the preferred image thereby becoming a
10 member of both the first and second sets of images.

41. The method of claim 40, wherein designating the most recently selected image

2 belonging to the second set of images as a preferred image comprises embedding
3 a tag within the most recently displayed image belonging to the second set of
4 images.

42. The method of claim 40, wherein designating the most recently selected image

2 belonging to the second set of images as a preferred image comprises setting a
3 directory attribute associated with the most recently displayed image belonging to
4 the second set of images.

43. The method of claim 40, wherein designating the most recently selected image

2 belonging to the second set of images as a preferred image comprises adding to a
3 list of preferred images an identifier corresponding to the most recently displayed
4 image belonging to the second set of images.

10005107 110201

44. The method of claim 40, further comprising:

2 deleting all images stored in the device except those belonging to the
first set of images.

45. The method of claim 40, further comprising:

2 uploading the first set of images to an external device.

46. The method of claim 45, wherein all images stored in the device are uploaded to

4 the external device, the external device subsequently operating upon only the first
set of images by identifying a tag embedded within each image belonging to the
6 first set of images.

47. The method of claim 40, wherein the device is a digital camera, a palmtop
computer, a PDA, a personal computer, or a communicator phone.

10005407-110204
